Canal Corporation Using Non-Toxic Dye to Identify Areas of Seepage in Glens Falls Feeder Canal

The New York State Canal Corporation today announced on-going efforts and the utilization of a non-toxic dye to identify potential areas of seepage in the Glens Falls Feeder Canal. The dye is being used to determine where seepage from the Canal may be entering basements of buildings on the Finch Paper property in the City of Glens Falls.

Dye testing may continue through the next week based on the results of the investigation and is non-harmful to individuals, animals, and the environment.

The Canal Corporation will undertake isolated repairs of the Feeder Canal in the coming weeks based on the results of the dye testing.

###

About the New York State Canal Corporation

New York's Canal system includes four historic canals: the Erie, Champlain, Oswego, and Cayuga – Seneca. Spanning 524 miles, the waterway links the Hudson River with the Great Lakes, the Finger Lakes and Lake Champlain. The canals connect hundreds of unique and historic communities across upstate New York.

The New York State Canal Corporation is a subsidiary of the New York Power Authority.
